

Julius Collins

QA Engineer | iOS Test Automation | Python

714-457-9721 | collinsjulius@gmail.com | linkedin.com/in/jujucollins | github.com/dev-jujucollins

PROFESSIONAL SUMMARY

QA Engineer with hands-on iOS software quality engineering and test automation experience gained across two engineering roles at Apple. Skilled in manual testing, regression testing, Python-based automation, API testing, defect triage, and CI/CD workflows. Built automation that reduced manual test setup time by 40% across 30+ devices and maintained 95-100% automated test coverage while migrating a test suite from Ruby to Python. Backed by 9 years of technical troubleshooting and root cause analysis across Apple and Windows environments.

TECHNICAL SKILLS

Test Automation: Python, Pytest, Selenium, Playwright, Appium

QA & Testing: Manual Testing, Regression Testing, Test Planning, Test Execution, Test Case Development, Defect Triage, Bug Tracking, API Testing

Tools & Platforms: Git, GitHub, GitHub Actions, CI/CD, Radar, Postman, Requests, Unix/Linux CLI

Core Strengths: Root Cause Analysis, Troubleshooting, Cross-Functional Collaboration, Documentation

PROFESSIONAL EXPERIENCE

Support Technician | Universal Music Group | 05/2025 - Present

- Provide front-line and remote technical support across hardware, software, and conferencing systems in a hybrid enterprise environment.
- Configure, deploy, and maintain Mac and PC systems using Jamf, SCCM/Intune, and ServiceNow.
- Test and validate new tools and applications before rollout, documenting best practices and ensuring operational readiness.

iOS Test Engineer Intern (GPU, Graphics, and Displays Software) | Apple Inc. | 07/2023 - 12/2023

- Executed daily display- and video-focused regression testing across multiple iOS software trains using manual and automated test methods.
- Documented, triaged, and escalated bugs through Radar to cross-functional teams, reducing post-release defects through earlier identification.
- Developed a Python automation script to restore test racks across 30+ devices, reducing manual testing time by approximately 40% and accelerating daily regression cycles.
- Maintained 95-100% automated test coverage across sprints while migrating iOS test automation from Ruby/UIA2 to Python and the Quick API framework.

Quality Engineer Intern (Self Service Engineering) | Apple Inc. | 01/2021 - 07/2021

- Collaborated cross-functionally with developers, engineers, and product managers on test case development and execution of test plans for each sprint.
- Performed daily regression testing for the Azul software train across products, services, and internal applications including Mobile Genius, Repair Central, and diagnostics.apple.com.
- Evaluated test results, reported defects, and triaged bugs using Radar.
- Created automation scripts for on-device and web-based application testing of the Apple Service Toolkit 2 platform using Python, Selenium, Device Compute, and the Quick API.

Genius | Apple Inc. | 06/2017 - 05/2025

- Diagnosed and resolved complex hardware and software issues across Apple's product line, applying systematic troubleshooting methodologies directly applicable to QA root cause analysis.
- Achieved certification to troubleshoot and repair all current Apple devices, demonstrating rapid technical learning and meticulous attention to detail.

PROJECTS

iOS UI Automation Framework: Native iOS UI test automation framework built with Appium and Python using the Page Object Model pattern for maintainable, scalable test coverage of the Settings and Calendar apps.

Test Environment Automation Script: Python script that restores test racks across multiple devices to target OS builds, supporting daily QA regression workflows and reducing manual setup time.

Demandware Inventory Scraper: Automation script that monitors product availability on Salesforce Commerce Cloud sites, scrapes inventory data, and outputs structured JSON for analysis.

EDUCATION

California State University, Fullerton: Coursework in Computer Science, 2015 - 2017
